For Immediate Press Release

Waupaca, WI, October 13, 2008:

Red Stag Engineering & Automation, Inc. Announces the Addition of New Rigging Division

Red Stag Engineering & Automation has always engineered and implemented a complete turn-key installation in our customer's plant. In order to do this, it was necessary to outsource the rigging portion of a project – but not any more! After 47 years of engineering and manufacturing hydraulic presses and special machinery for plant automation, Red Stag is proud to announce that we have formed a new Rigging Division.

Whether a single machine is installed or an entire plant is being set up, Red Stag's Rigging Division encompasses all facets of rigging that are required for a complete quality installation in our customer's facility. Our division may be new, but our staff has been performing quality installations throughout the world since 1961. We use current laser technology, modern transportation modes and the proper up-to-date rigging equipment to ensure a 100% customer satisfaction rating.

Please direct all inquiries to Red Stag's corporate office:
